

MANJUNATHAN D

QA AUTOMATION ENGINEER | SDET | PLAYWRIGHT | TYPESCRIPT

7868963101 | manjunathan5838@gmail.com | linkedin.com/in/manjunathan-testing-engineer

PROFESSIONAL SUMMARY

Quality Assurance Engineer with 4+ years of experience across manual testing, UI automation, API testing, test framework development and CI/CD. Strong hands-on experience with Playwright, TypeScript, Cucumber, Selenium, Java, API testing, SQL, Page Object Model, fixtures, hooks, authentication, multiple environments and parallel execution. Recent full-stack development exposure across TypeScript, Node.js, Astro, React, Cloudflare APIs and Directus, providing broader understanding of frontend-to-API-to-data flows and production debugging. Experienced in AI-assisted engineering using Claude Code and GitHub Copilot with human review, testing and validation.

CORE TECHNICAL SKILLS

Automation	Playwright, TypeScript, Cucumber, Selenium, Java, Page Object Model, Fixtures, Hooks, Authentication, Parallel Execution
Testing	Functional, Regression, Smoke, Sanity, UI, E2E, API, Integration, Cross-browser, Defect Management, Test Design
API / Data	REST APIs, Postman, Playwright API, HTTP, JSON, SQL, Joins, Subqueries, CTEs, Window Functions, Data Validation
Development	TypeScript, JavaScript, Node.js, React, Astro, HTML, CSS, Tailwind CSS, Cloudflare APIs
DevOps / Tools	Git, GitHub, GitHub Actions, CI/CD, Linux, VS Code, PNPM, Directus
AI Engineering	Claude Code, GitHub Copilot, AI-assisted implementation, code review, debugging and test generation

PROFESSIONAL EXPERIENCE

Orane Healthcare India Private Limited

Quality Assurance Engineer | April 2022 – Present

- Progressed from Junior Software QA Analyst to Quality Assurance Engineer in March 2024, taking increasing ownership across automation, testing, debugging and development.
- Built and maintained automated UI and API coverage using Playwright, TypeScript and Cucumber, applying Page Object Model, reusable fixtures, hooks, authentication and environment-specific configuration.
- Executed functional, regression, UI, API and end-to-end testing across healthcare workflows and web applications; analyzed defects, reproduced issues and supported release validation.
- Worked with GitHub Actions to run builds and automated tests in CI, review failures and use test reports/artifacts to investigate release issues.
- Worked on healthcare products including online consultation, phone/video consultation, iCliniq Wellness, NativeCare, Korina Healthcare, MSKCC and iCliniq Evals.
- Contributed to iCliniq Wellness migration work, including testing modernized pages, bug fixes and legacy-to-modern routing/reverse-proxy behavior.
- Worked on iCliniq Evals involving patient questions, doctor responses and validation of AI-generated responses.
- Worked on the iCliniq Content Platform across frontend features, React components, API integration, search, filtering, pagination, backend service changes, database-query-related work, testing and bug fixing.
- Developed and tested frontend/API flows using Astro, React and TypeScript with backend/API services, Cloudflare APIs and Directus as a content/data layer.
- Used SQL and API validation to investigate data-related defects and trace issues across UI, service/API and data layers.
- Used Claude Code and GitHub Copilot as engineering assistants: understood requirements, planned implementation, reviewed generated code, ran builds/tests, debugged failures and refined changes.
- Contributed to an AI-assisted production-analysis workflow in GitHub Actions that reviews current changes for high-priority issues, incomplete work, build/lint problems and related release risks.

SELECTED PROJECTS

iCliniq Content Platform — Frontend/API development and QA; search, filtering, pagination, API integration, backend/service changes, data/query validation and regression testing.

iCliniq Evals — Development and testing of patient-question/doctor-response workflows and AI-response validation.

iCliniq Wellness — Testing, bug fixing, page migration and legacy/modern routing validation.

Online Consultation Platform — Functional, regression, UI, API and end-to-end testing of healthcare consultation workflows.

Phone / Video Consultation — Testing communication/session workflows, authentication, permissions, failure and recovery scenarios.

NativeCare / Korina Healthcare / MSKCC — Development and testing exposure across healthcare workflows and remote consultation-related features.

AUTOMATION & ENGINEERING HIGHLIGHTS

- Designed maintainable automation around Page Object Model, reusable fixtures, hooks, authentication and common test utilities.
- Used resilient Playwright locators and web-first assertions, with synchronization strategies intended to reduce flaky tests.
- Worked with multiple environments and parallel test execution; considered test-data isolation and authentication-state management.
- Automated API validation including status codes, request/response data, authentication, negative scenarios and API-to-UI consistency.
- Used SQL for database/data validation, defect investigation and verification of application behavior.
- Worked with Git workflows including clone, pull, checkout, commit, push, stash, conflict resolution and GitHub-based collaboration.
- Worked in a GitHub Actions workflow covering code checkout, dependency installation, build and automated test execution.

EDUCATION

Bachelor of Engineering (B.E.) — Electrical and Electronics Engineering

Gnanamani College of Technology | 2017 – 2021 | 72%

ADDITIONAL INFORMATION

Target roles: QA Automation Engineer, SDET, Senior QA Automation Engineer, Automation Test Engineer, Software Engineer in Test.

Primary stack: Playwright + TypeScript + Cucumber + API + SQL + GitHub Actions.

Development exposure: TypeScript/JavaScript, Node.js, Astro, React, Cloudflare APIs and Directus.

Work environment: Linux, VS Code, Git/GitHub, PNPM, Postman.
